Subject: PSC Performance During RF17/SGRP Outage at Waterford 3

Jeremiah,

During RF17 it has been a pleasure working with you and the PSC crew. The performance of your workers has been nothing but top notched. Completion of the work assigned to you was on time and many times ahead of schedule based upon PSC looking ahead for opportunities when items could be prepared for reinstallation work later in the outage. In doing this the reinstallation work was completed on schedule and most times ahead of schedule. In addition, when asked to complete the work on the replacement of the SG2 primary man way platform to support the mode 6 milestone this work was completed on time in support of this milestone with first time quality and safety.

In the area of safety, it should be noted that a large amount of work was completed by PSC with zero injuries. This is an accomplishment to be recognized.

Please pass along a thank you to all your folks for a job well done.
